

////// XMT® 400 ARC REACH®

Every bit as tough as your crew.

XMT® 400 ArcReach® offers more jobsite flexibility as the lightest and smallest multiprocess welding machine in its amperage class, delivering 400 amps at 60% duty cycle — allowing you to tackle thicker material and longer welds with a larger diameter wire and gouging by upsizing a carbon diameter. And it's packed with even more features and technology to boost your productivity than the tried-and-trusted XMT® 350 that's been your workhorse for years.

A streamlined user interface and multiple technologies remove any guesswork, making the XMT® 400 ArcReach® incredibly easy to use. With portability and excellent arc performance that allow more jobs to get done with one machine, this is the choice of professionals who stake their reputation on the quality of their work.

Key Features

These technologies go a long way toward making things easier and more efficient on the jobsite.

ArcReach® Technology

Keeps welders welding by providing remote control of the power source without a cord — saving time and money.

Auto-Line™ Technology

Automatically adjusts the power source to operate properly with any primary input voltage. Just plug in and go.

Dedicated Weld Processes

Crews can dial in the exact arc they need (gouging, flux core, self-shielded, etc.), when they need it, with industry-leading arc performance.
